Schema & Customizations

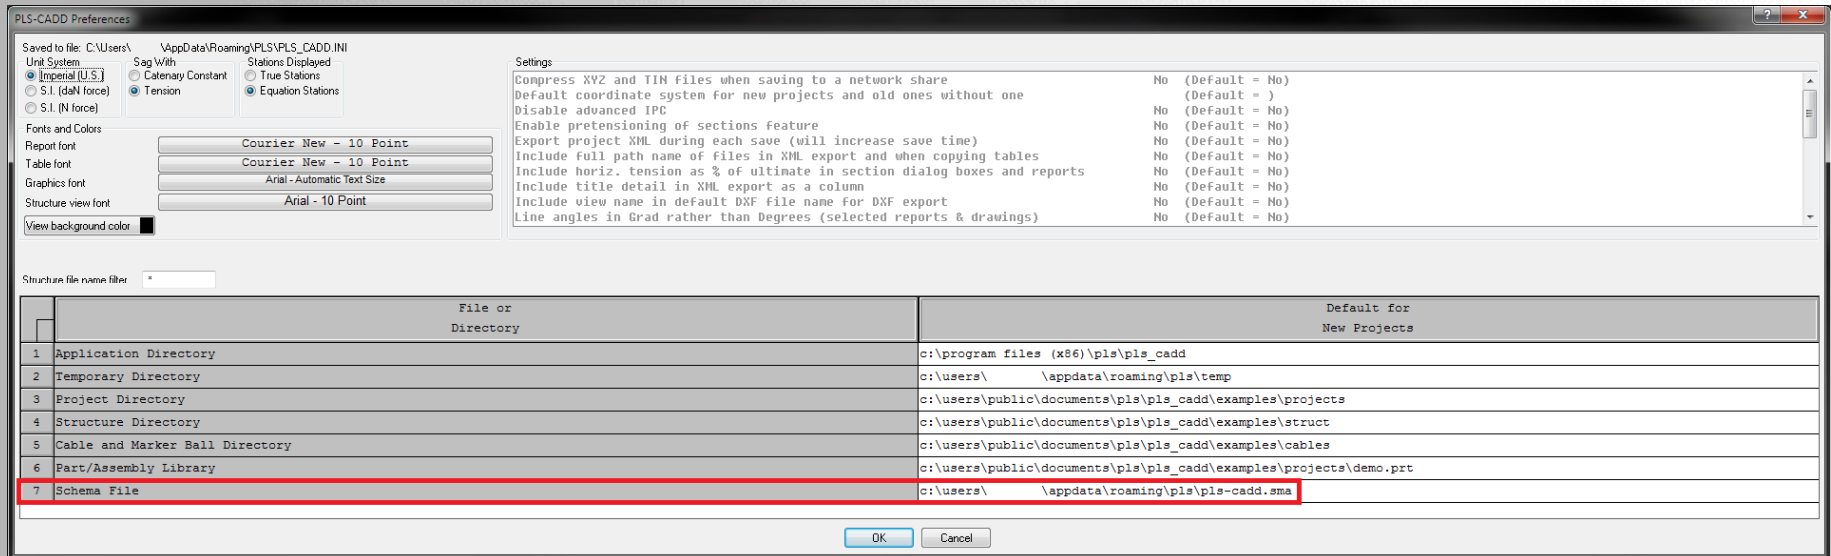

by

Jesse Kohler, P.E.

Power Line Systems, Inc.

What & Where is Schema

- The Schema file (.sma) has a location defined in File\Preferences...
- The Schema file stores a host of customizations within the software.

Tips for Storing Schema

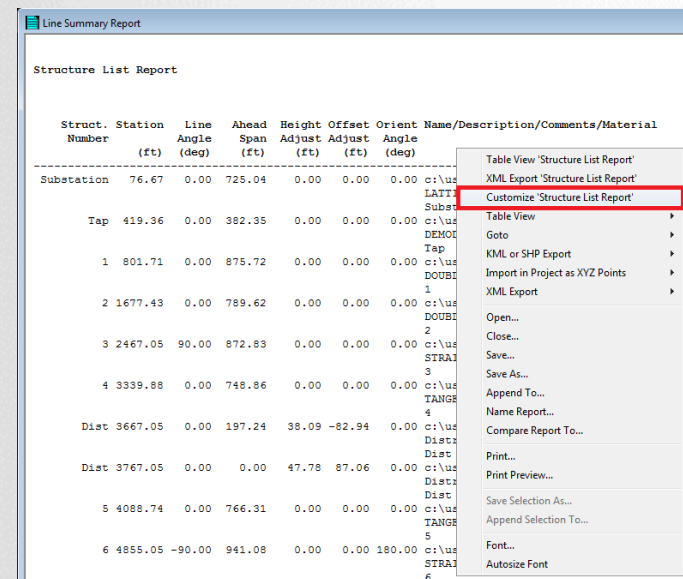

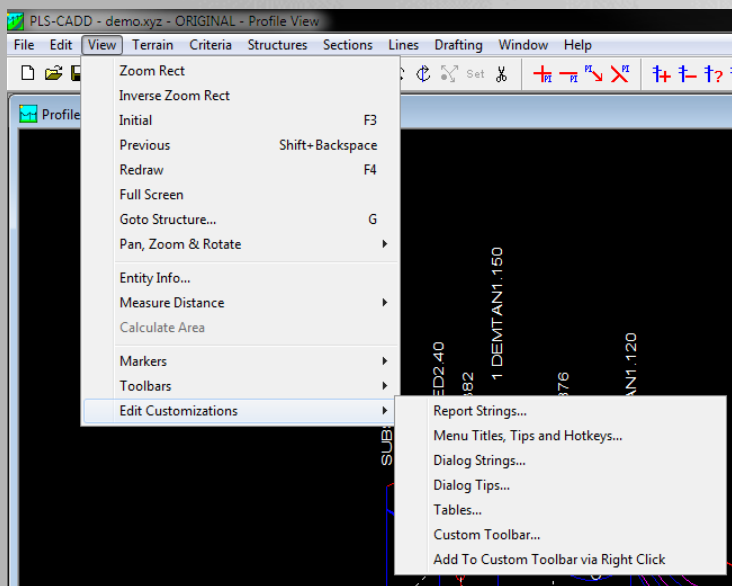

- Choose a name other than the default name pls-cadd.sma
 - Something like YourName.sma
- Store you .sma file someplace safe where only you have access to it
 - Something like a folder on your desktop
- Keep a backup copy someplace
 - On a USB flash drive for example
- Right click on the .sma file in Windows, select properties, and under the general tab select Read-only so that no undesired changes can be made
- For custom toolbars you can copy/paste information into an Excel spreadsheet for safe keeping as well
- Be cautious of project specific .sma files
 - If used, customizations will only appear for that particular project

Uses for Schema

- Tailor reports to have format and data to yours or your client's needs
- Create schema files to remove or disable menu items and commands, i.e. drafter.sma or surveyor.sma
- Create schema files to label menu items and commands with your own name or language
- Create hotkey shortcuts for favorite commands
- Create up to 4 custom toolbars with user-defined text or icons for many popular commands.
- Control XML output and inclusion of sub-section reports

Accessing Customizations

- All customizations can be found under View\Edit Customizations\
- Almost all reports can be customized by right clicking inside a report and selecting customize

Menu Commands & Hotkeys

Customize Menu Titles and Tips

You can customize the menu items below to translate them into another language or to add your own keyboard accelerators. To add a keyboard accelerator copy the menu name (with an ampersand '&' added before any underlined letter) add "\t" (backslash then a 't') followed by your keyboard shortcut. Your shortcut can use any letter, number or function key, but not other special keys. You can preface the short cut with "Shift-", "Ctrl-", or "Alt-" if one of those keys should be pressed as well. For example, you could make Alt-F10 run the Backup command by entering "&Backup\tAlt-F10". Enter "xxxxremovexxxx" to remove a menu item altogether or "xxxxdisablexxxx" to disable it.

	PLS Menu Title	User Menu Title	
1	&File		
2	&New		
3	&PLS-CADD		Create
4	PLS-CADD-&Lite		Create
5	&Open		Open a
6	Import		
7	&User Defined XYZ...		Import
8	User Defined PFL...		Import
9	&TLC5...		Import
10	T&VA...		Import
11	UP&A...		Import
12	CALD XYZ...		Import
13	CALD PFL...		Import
14	Staking Table (from Spreadsheet/Database)...		Create
15	Create New Structure...		Create
16	&Edit Structure		Edit

New Report Format Interface

Customize "Structure List Report"

Customizations saved to file: c:\users\ \appdata\roaming\pls\pls-cadd.sma

Simple Customizations (Show/Hide Columns)
 Advanced Customizations (Column order, Formatting, Translation..)

PLS title: Structure List Report

User title: _____

Include in report Include in XML export

	Power Line Systems' Name	User's Name	Table Format	Report Format	Report Display Order (0 to hide)
1	Struct.\nNumber	Struct.\nNumber	%7s	%7s	1
2	Station\n\nn%m	Station\n\nn%m	%8.21f	%8.21f	2
3	Line\nAngle\nn%m	Line\nAngle\nn%m	%7.21f	%7.21f	3
4	Ahead\nSpan\nn%m	Ahead\nSpan\nn%m	%8.21f	%8.21f	4
5	Height\nAdjust\nn%m	Height\nAdjust\nn%m	%8.21f	%8.21f	5
6	Offset\nAdjust\nn%m	Offset\nAdjust\nn%m	%7.21f	%7.21f	6
7	Orient\nAngle\nn%m	Orient\nAngle\nn%m	%7.21f	%7.21f	7
8	Name/Description/Commer	Name/Description/Commer	%-36s	%-36s	8

Data Formatting

Data Type

String
 Integer
 Real

Data Width

Minimum number of characters - will add blank characters if needed to reach this number:

Maximum number of digits to the right of the decimal point:

Alignment

Left Aligned
 Right Aligned

Notation

Decimal (e.g. 1.2345)
 Scientific (e.g. 1.234e003)
 Shortest of Decimal and Scientific

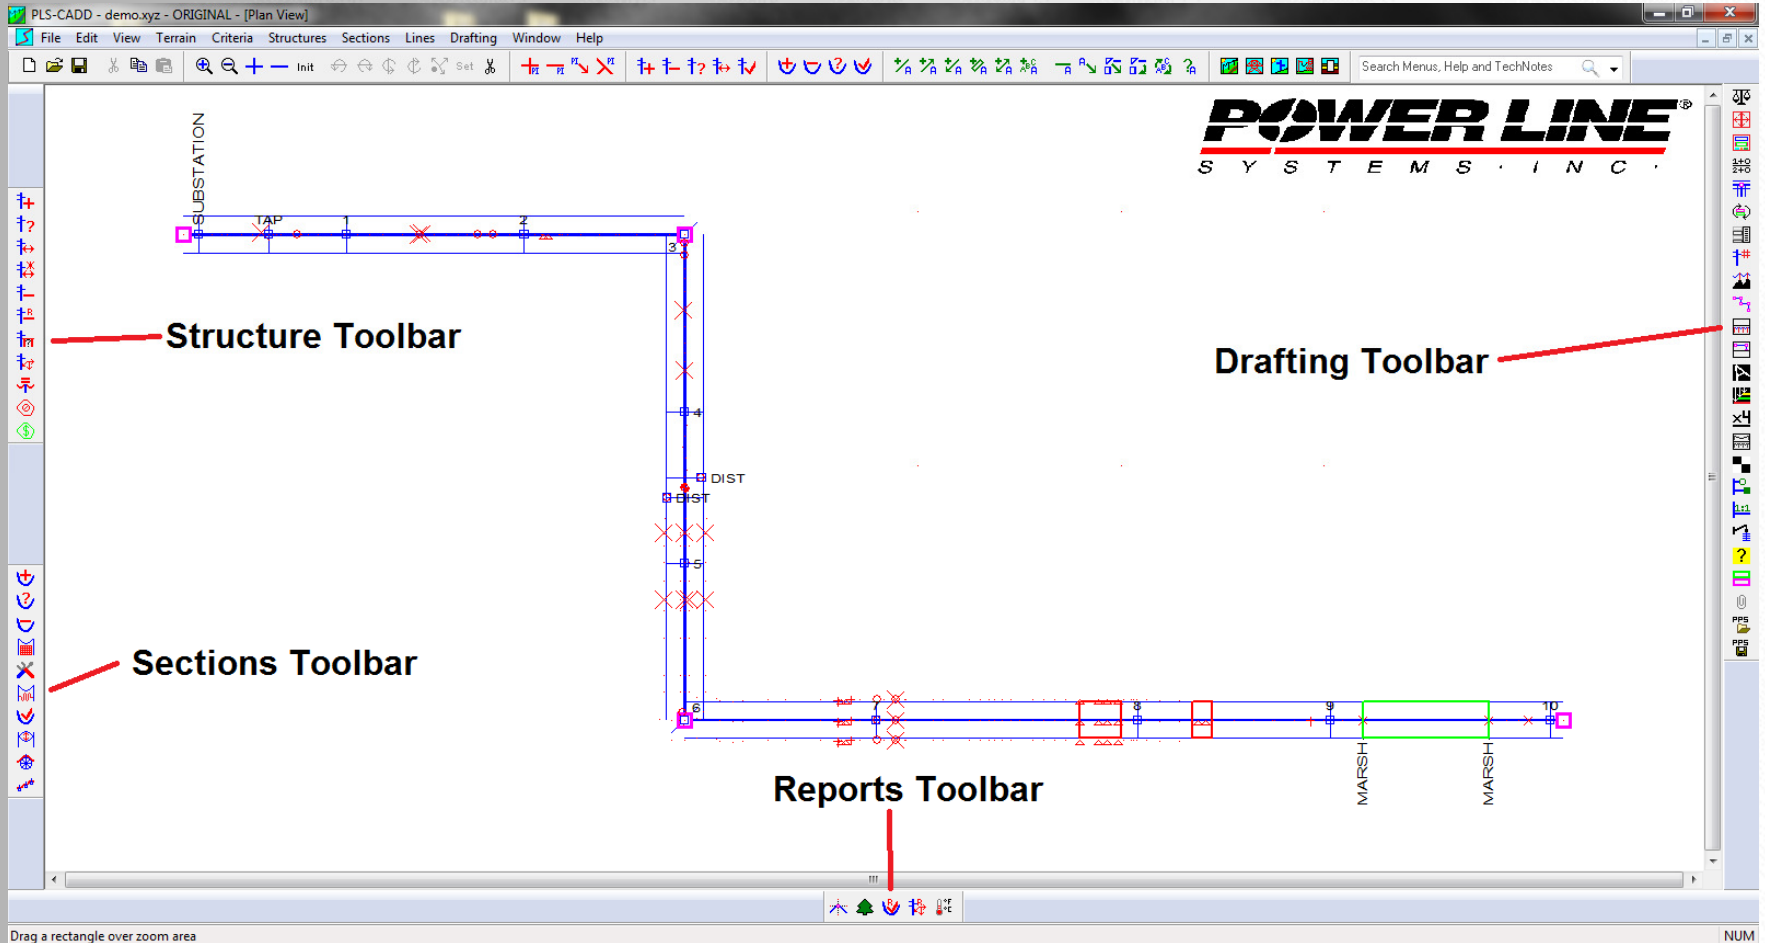

OK Cancel

OK Cancel

New Custom Toolbars

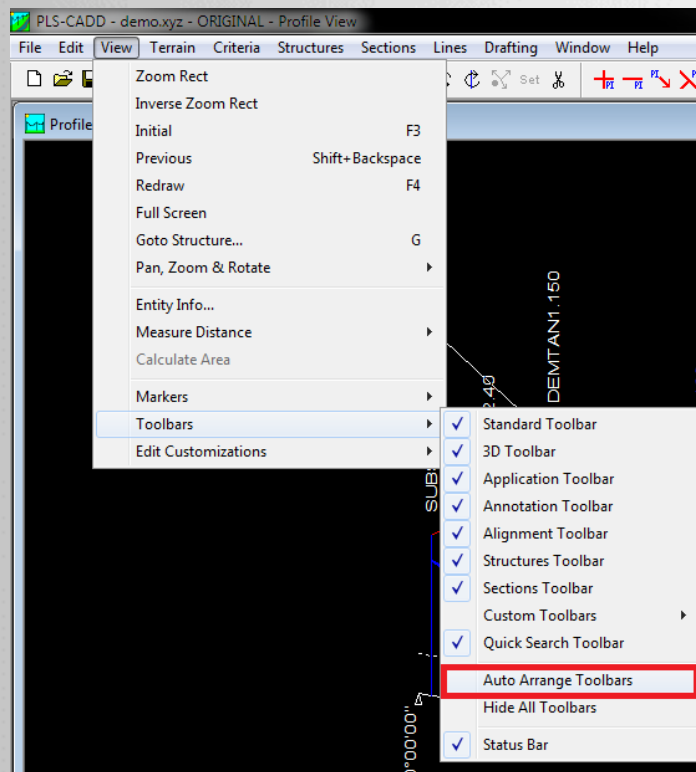

- Now configure up to 4 custom toolbars
- Toolbars can be renamed
- Icons can be utilized for buttons in custom toolbars
 - Over 150 icons created for commands in PLS-CADD, TOWER, & PLS-POLE
 - Text can still be utilized if icon isn't desired
- Icons have been created for existing toolbars as well
 - i.e. you can create your own structure toolbar and have a command for adding a structure
- Toolbar commands can be added via a right click interface
 - When enabled in this mode you can right click on any command desired and it will be added to a custom toolbar of your choice

Custom Toolbar Example

Toolbars Not Staying Where They Should?

- Disable the auto-arrange toolbars feature

Programmable Mouse

- Corsair Vengeance M95
 - 13 programmable buttons plus left and right click
 - Programmability includes simple one key keyboard commands to full blown macros
 - 6 different possible profiles, with the last saved one stored on the mouse itself
 - A good example would be for creating 1 profile in PLS-CADD and others for PLS-POLE or TOWER
 - Can be used to control various commands and operations in PLS software.
 - Can be combined with schema and hotkeys to make programming easier.
 - On the fly DPI adjustments
 - Programmable keyboards are also available
